4-sided Dice – Tetrahedron

Description:

A 4-sided die is a three-dimensional shape called a tetrahedron. A tetrahedron, also known as a triangular pyramid, is a polyhedron composed of four triangular faces. A regular tetrahedron, such as our 4-sided die, is one in which all four faces are equilateral triangles. It is one of the five regular Platonic solids, which were named after Plato, a philosopher from Ancient Greece.

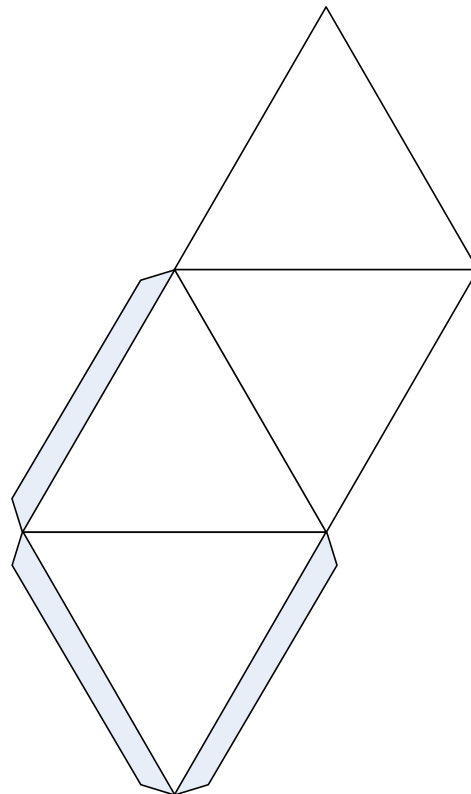

Tetrahedron Quick Facts:

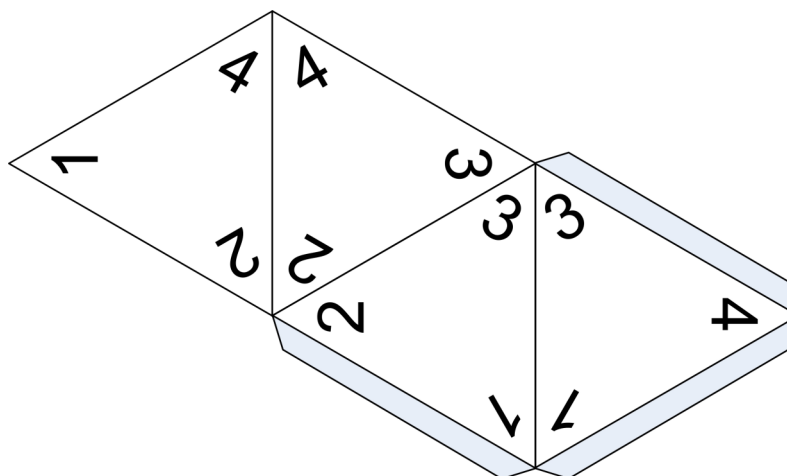

- Faces: 4
- Vertices: 4
- Edges: 6

! The Royal Game of Ur, dating from 2600 BC, was played with a set of tetrahedral dice.
